ISOMETRIC VIEW

Not to scale; seen from the front right and above, about 30 deg elevation

LAYOUT RULES (MM)

Tail sheave block at x = 0; door threshold at 7,000; drum axis at 15,000
Working length up to 15,000 tail sheave to capstan (R5)
Capstan at least 6,000 from the ramp roller (fleet angle 1.4 deg or less)
Each stroke hauls one full box out while the other goes back empty
Box 1 on y = 0; box 2 on the return leg, y = 300; they pass 42 apart
Ramp centred between the box lines; inner width 610 holds both boxes
Box travel up to 12,000; tail rope 12.5 m here (6 and 9 m for shorter runs)
Tail block: 4 M12 anchors in a sound slab of 100 or more (R7)
Sling from the anchor eye, level or rising 10 deg at most
Nobody in the rope lines or beside the sheaves while the cranks turn
Third-angle; front view from -Y; X along the rope line
